THIS IS UNEVALUATED INFORMATION

25X1

- 1. During the summer of 1952, arrangements were made for the construction of a jet dirfield in the vicinity of Huzlov (49 40 N 16 30 E), Ozechoslovskis. Huzlov is near the main Pranue-Brno-Bratish va highway; the highway provides the only access to the site.
- 2. In the fall of 1952 a commission of high ranking officers and representatives of the city of Erno started to survey the proposed construction site. The field is to be one kilometer by one kilometer in size.
- 3. The site folls under the jurisdiction of the city of Brno.
 The city's Trinking water is collected in the same vicinity.
 It is believed that the high tension lines which are considered to be obstacles for the new sirfield are to be removed.
- 4. Between August and October 1952, portions of the highway near Otyricet Land and Brezova were blocked off so that bridges in the stretch could be reinforced to carry heavier loads.
